```java
public class University {

    private static String universityName = "XYZ University";

    private String studentName;

    public University(String studentName) {

        this.studentName = studentName;

    }

    public static void displayUniversityName() {

        System.out.println("University Name: " + universityName);

    }

    public void displayStudentDetails() {

        System.out.println("Student Name: " + studentName);

        displayUniversityName();

    }

    public static void main(String[] args) {

        University student1 = new University("Alice");

        University student2 = new University("Bob");

        University student3 = new University("Charlie");

        student1.displayStudentDetails();

        student2.displayStudentDetails();

        student3.displayStudentDetails();

    }
```

}
